

JavaScript Basic Practice Tasks (20 Tasks)

Task 1

Create three variables: `studentName` using `let`, `collegeName` using `const`, `age` using `var`. Print all values in the console.

Task 2

Create a variable `city='Rajkot'` using `let`. Change its value to `'Ahmedabad'` and print the result.

Task 3

Create a constant variable `country='India'`. Try changing its value and observe the output/error.

Task 4

Create variables `a=25` and `b=10`. Print Addition, Subtraction, Multiplication, Division, and Modulus.

Task 5

Create `count=5`. Use `count++` and `count--`. Print the value after each operation.

Task 6

Create `marks=50`. Use `+=`, `-=`, `*=`, `/=` and print the result after every operation.

Task 7

Create `salary=10000`. Increase salary by 2000 using assignment operators.

Task 8

Compare `x=20` and `y=30` using `==`, `!=`, `>`, `<`, `>=`, `<=`.

Task 9

Create `num1='10'` and `num2=10`. Check `num1 == num2` and `num1 === num2`.

Task 10

Create `age=22` and `hasLicense=true`. Check if a person can drive using `&&`.

Task 11

Create `isWeekend=false` and `isHoliday=true`. Use `||` to determine if the office is closed.

Task 12

Create `isLoggedIn=false`. Use `!` operator and print the result.

Task 13

Use `console.log()`, `console.warn()`, and `console.error()` to display different messages.

Task 14

Use `console.time('test')`; run a loop from 1 to 100000 and end with `console.timeEnd('test')`.

Task 15

Create an array of 5 students and display it using `console.table()`.

Task 16

Use `console.clear()` and observe what happens in the browser console.

Task 17

Create an HTML heading with an id. Access it using `document.getElementById()` and print the element.

Task 18

Create 3 paragraphs with the same class. Access them using `document.getElementsByClassName()`.

Task 19

Create 5 list items. Access them using `document.getElementsByTagName()`.

Task 20

Create `<h1 id='title'>Hello JavaScript</h1>`. Use `querySelector()` and `querySelectorAll()`. Change content using `innerHTML`, `innerText`, and `textContent`. Also print various type of examples.
